Bazel

気づいたら, apt update で

The following signatures were invalid: EXPKEYSIG 3D5919B448457EE0 Bazel Developer (Bazel APT repository key) developer (Bazel APT repository key)

的なエラーがでてた.

最近 bazel 使ってないから一旦削除してもいい気がしつつ,

curl https://bazel.build/bazel-release.pub.gpg | sudo apt-key add -

とか.
