

FreeBSD/VMWare

思うところあって VMWare のゲスト OS として FreeBSD をセットアップ .

VMWare ならではの設定

関連パッケージのインストール

```
pkg install open-vm-tools xf86-input-vmouse xf86-video-vmware
```

/usr/local/etc/X11/xorg.conf.d/input-vmouse.conf

```
Section "InputClass"
    Identifier      "Mouse0"
    Driver          "vmouse"
    MatchIsPointer  "on"
EndSection
```

/usr/local/etc/X11/xorg.conf.d/screen-resolution.conf

```
Section "Screen"
    Identifier      "Screen0"
    Device         "Card0"
    SubSection     "Display"
        Modes      "1920x1080"
    EndSubSection
EndSection
```

キーレート

どのくらいがいいかよくわからないので ,

```
xset r rate 200 30
```

とかして一時的に変更 .

Samba

/usr/local/etc/smb4.conf

```
[global]
    workgroup = WORKGROUP
    server string = carotte
    netbios name = carotte
    dns proxy = no
    local master = no
    os level = 200
    unix charset = UTF-8
    dos charset = CP932
    hosts allow = 127.0.0.1, 192.168.206.
    security = user
    map to guest = Bad User
    load printers = no
    log file = /var/log/samba4/log.%m
    guest ok = no

[homes]
    comment = Home Directories
```

```
browseable = no  
read only = no  
create mask = 0700  
directory mask = 0700  
valid users = %S
```
