L"   "

To specify a string of type wide-character (wchar_t[]), precede the opening double quotation mark with the character L

String ^ str   ^

A handle to an object on the managed heap points to the "whole" object, and not to a member of the object.The common language runtime maintains a separate heap on which it implements a precise, asynchronous, compacting garbage collection scheme. To work correctly, it must track all storage locations that can point into this heap at runtime. ^ provides a handle through which the garbage collector can track a reference to an object on the managed heap, thereby being able to update it whenever that object is moved.
